OUTBREAK SOLUTIONS RANGE
As a provider of speciality aircraft disinfection and hygiene solutions, Callington Group recognises the vital role Coronavirus (COVID-19) disinfection, fumigation and sanitation practices can play in the airline industry.

**WHAT IS CORONAVIRUS?**

As per the World Health Organisation, Coronavirus (CoV) are a family of viruses that range from the common cold to the Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). Coronaviruses are transmitted between humans and animals, and can cause a range of illness from common colds to more severe respiratory diseases. It is understood the virus is predominantly spread via close contact with an infected person who has the symptoms of the illness such as breathing difficulties, fever, cough or shortness of breath.

**PREVENTING THE SPREAD**

Within the aviation industry, passengers and airline crew can follow the World Health Organisation recommendations for good hygiene practises to prevent the spread of the virus.

- **Cleaning hands with soap and water for at least 20 seconds.**
- **Where soap and water are not available, using alcohol-based sanitisers.**
- **In addition Callington suggests all cabin surfaces should be cleaned with approved broad-spectrum disinfectants.**

---

**Disinfectant Resistance**

Netbiokem DSAM has been tested in accordance with EN14476 against Influenza A (H1N1) a surrogate virus for lipophilic viruses (such as Human Coronavirus).
